

INTEMPCO TMR sanitary temperature sensor employs a Pt100 Class A resistance temperature detector (RTD) combined with an integrated loop powered 4-20mA output transmitter. Optional digital indicator, model PIR, plugs directly to the TMR Hirschmann (DIN 43650) plug. This sensor is rugged and all SS316 construction. The standard sanitary tri-clamp is welded to the sheath and then ground and polished to a high finish. The process contact surfaces are free of pits, and crevices thus preventing corrosion and bacterial growth.

TMR is factory calibrated to customer temperature requirements. Re-calibration via zero and span potentiometers, at the connector, is possible.

PIR Ordering Information

Description	Model No.
Standard Unit	PIR-01
With Alarm	PIR-02

The PIR is a universal display unit usable in all 4-20 mA transmission circuits. Assembled directly between a standard DIN 43650 (Hirschmann style) plug and socket assembly, the PIR is the easiest of displays to install. The PIR is fully scalable through two control buttons. Programming capabilities include scaling, decimal point location, damping and, for units with a switch, setpoint value.

Power is provided to the PIR directly via the 4–20 mA loop, so no additional power supply is required. The programming information resides inside the PIR's EEPROM memory, making the unit immune to power failures up to ten years in duration.

Small, easily installed the PIR is the ideal way to get more from your 4-20mA transmitter.
